

Testresultater (Hovedprosjekt - FLOT)

Alle tester er utført over en tidsperiode på 15 minutter for hver enkelt test.

Det er to typer grafer:

1. Vegeta-graf som viser responstid (i millisekunder) og antall sekunder som har gått siden testen startet.
2. Grafana-graf som viser ressursbruk basert på data innhentet ved hjelp av Zabbix.

Linker til snapshots er lagt til for å tillate litt mer dynamiske grafer (for å se spesifikke verdier).

Snapshots viser både Windows og Debian samtidig, slik at ressursbruk kan sammenlignes direkte.

Debian

Debian - 5 forespørsler i sekundet

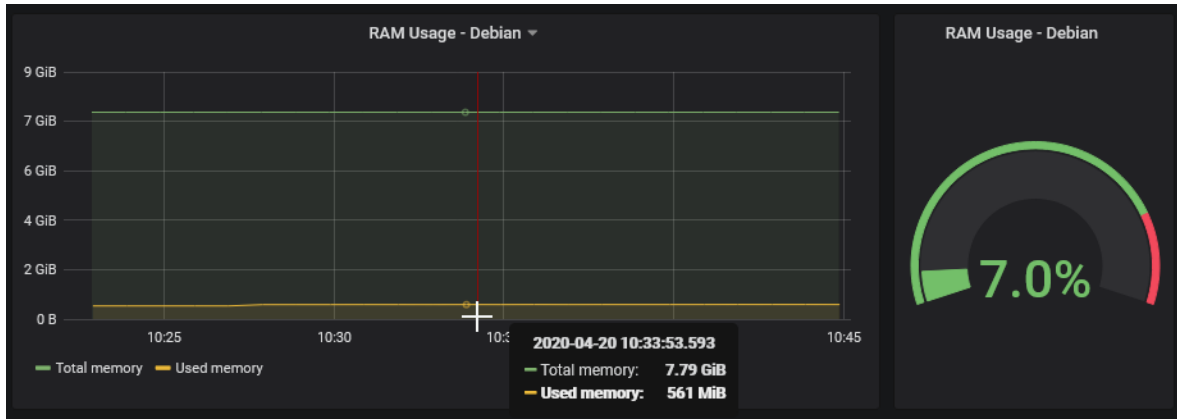

Resultater fra Vegeta:

CPU-bruk:

RAM-bruk:

Snapshot (5 forespørsler i sekundet)

Debian - 10 forespørsler i sekundet

Resultater fra Vegeta:

CPU-bruk:

RAM-bruk:

Snapshot (10 forespørslar i sekundet)

Debian - 15 forespørslar i sekundet

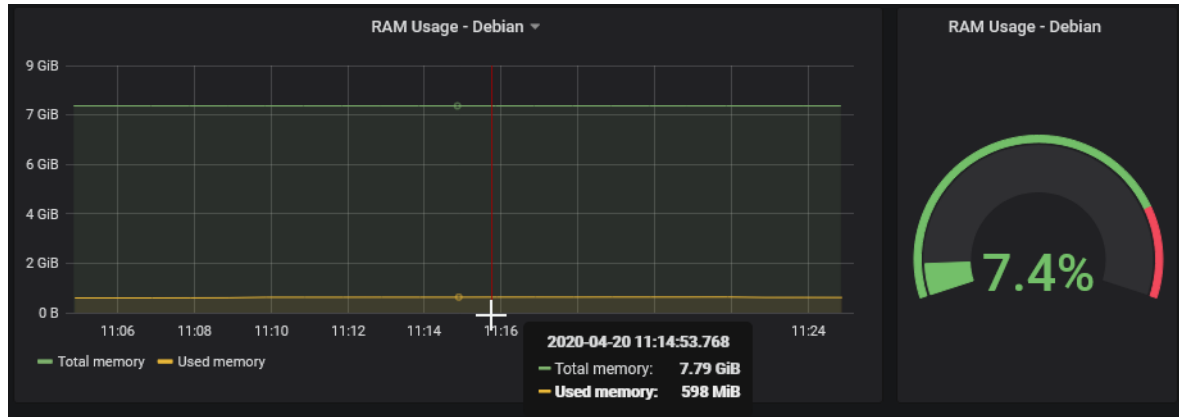

Resultater fra Vegeta:

CPU-bruk:

RAM-bruk:

Snapshot (15 forespørsler i sekundet)

Debian - 30 forespørsler i sekundet

Resultater fra Vegeta:

CPU-bruk:

RAM-bruk:

Snapshot (30 forespørsler i sekundet)

Windows

Windows - 5 forespørsler i sekundet

Resultater fra Vegeta:

CPU-bruk:

RAM-bruk:

Snapshot (5 forespørslers i sekundet)

Windows - 10 forespørslers i sekundet

Resultater fra Vegeta:

CPU-bruk:

RAM-bruk:

Snapshot (10 forespørsler i sekundet)

Windows - 15 forespørsler i sekundet

Resultater fra Vegeta:

CPU-bruk:

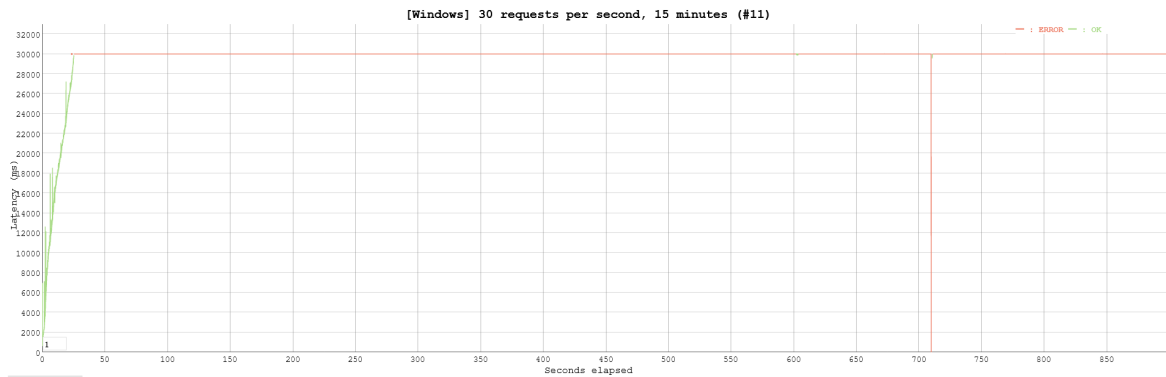

RAM-bruk:

Snapshot (15 forespørsler i sekundet)

Windows - 30 forespørsler i sekundet

Resultater fra Vegeta:

CPU-bruk:

RAM-bruk:

Snapshot (30 forespørslar i sekundet)
